

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1918 Excerpt: ...by maps made in the field by the author with the aid of a planetable and sighting-rule. The outline map was made in the survey of the group in 1914 and 1915 by Vaughan and Shaw.² The various keys will now be taken up separately and the species illustrated by symbols on the distribution maps. A comparison is made in each case with Lansings survey. Millspaugh, C. *Flora of the Sand Keys of Florida*. Field Columbian Museum, Publication 118, Bot. Series n, No. 5. Vaughan, T. W., and E. W. Shaw, *Geologic Investigations of the Florida Reef Tract*. Carnegie Inst. Wash., 1915, Year Book No. 14, p. 232. JL. **LOGGERHEAD KEY**. This is the largest of the Tortugas group and also the highest above sea-level and according to tradition it had in earlier times the largest stand of trees. Old fishermen (and the report was current in the times of the older light-house keepers) state that 75 or 80 years ago this Loggerhead Key, showing buildings of the laboratory on the north end and of the light-house on the south. Walks and paths are indicated by lines. One inch = one-fifth statute mile. island, as well as Garden Key and others of the group, supported a large stand of old white buttonwood trees, *Conocarpus erectus* L. These were largely cut down by fishermen, who occasionally camped for perhaps several weeks or months in the Tortugas; fires also are said to have had their share in devastating this old silvan flora. The central group of very old and large buttonwood trees in the parade-ground of Fort Jefferson on Garden Key is the only remnant of this supposed aboriginal silvan flora. The booby, a kind of gannet, is said to have inhabited these islands, but has disappeared with the passing of the trees. Old fishermen relate that men, armed with clubs, would stealthi...
